contents preface i history and theory of spectroscopy 1 historical review 2 the atom in spectroscopy
 ii light sources 1 the electric arc 2 the spark iii spectroscopes 1 optical systems 2 industrial
 spectrographs 3 spectroscope construction iv spectroscopic analysis 1 qualitative analysis 2
 determinations 3 quantitative analysis v the spectroscope in mineralogy 1 tests used in mineral
 identification 2 application of the spectroscope in mineral classification vi characteristic lines of the
 elements vii wave length table chart appendix conversion table bibliography firms selling
 spectrographic materials index preface too many chemists mineral collectors prospectors and even
 assayers struggle with tedious chemical and uncertain flame and blowpipe tests when a
 spectroscope would give far more prompt results with electricity universally available and with
 present day instruments and parts so low in cost spectroscopic equipment should be in every school
 and laboratory this book has been written to assist those who wish to analyze ores minerals alloys
 and inorganic chemicals or wish to teach others to do so in the qualitative analysis of such materials
 there is no instrument so rapid and accurate as the spectroscope although the analyst must remain
 within its limits of operation this is also true of the quantitative analysis of these materials although
 speed comes only after some experience one may very soon acquire the necessary technique for
 accurate determinations the author has attempted to point out some of the short cuts to quick
 spectroscopic success direct methods of burning samples are shown the key lines of each element
 have been selected and a new chart table has been prepared which shows both the spacing of
 spectral lines and their wave lengths an increasing number of schools and universities have courses
 in spectroscopy and many industrial plants use spectrographic equipment to speed up the solution of
 their special problems of analysis the bulk and cost of spectroscopes tend to increase in geometric
 ratio with efficiency and thus the price of a commercially built high dispersion instrument is usually
 beyond the reach of the individual analyst the parts necessary to make a powerful instrument are few
 and the essential construction is very simple the writer believes that instructions for making effective
 instruments at costs so low as to be within the reach of all will be appreciated one section of the
 book has therefore been devoted to such instructions largely from his own experience but also from
 the literature see bibliography a considerable amount of material has been arranged in what is hoped
